

TO SUPPLY LEFTOVER FOOD TO THE POOR

Date	20-06-2025
Team ID	LTVIP2025TMID29556
Project Name	To Supply Leftover food to Poor
Maximum Marks	

Chapter 1 Introduction

Introduction:

In a world where millions go to bed hungry each night, vast amounts of edible food are wasted daily—often discarded by restaurants, event organizers, and households. This paradox of waste and want has inspired our mission to bridge the gap between surplus and scarcity. Our project, *"From Plate to Purpose,"* is a community-driven initiative aimed at collecting leftover food and distributing it to underprivileged individuals.

By leveraging technology, building partnerships with food establishments, and coordinating with nonprofit organizations, we strive to create a reliable network that ensures excess food finds its way to those in need. Our goal is simple but profound: reduce food waste, fight hunger, and build a compassionate ecosystem where everyone has a chance at a full meal.

1.1 - Project Overview:

Food wastage is a pressing global challenge, especially in urban centers where surplus from restaurants, events, and households often ends up in landfills. Simultaneously, countless individuals face daily hunger and malnutrition. *From Plate to Purpose* bridges this gap by creating a structured, tech-enabled system that redistributes edible leftover food to those in need.

This project brings together food donors—such as restaurants, caterers, and supermarkets—with NGOs and volunteers to enable timely, safe, and dignified delivery of meals to underprivileged communities. Through a user-friendly mobile and web platform, donors can list excess food, track pickup schedules, and monitor their impact.

Our approach emphasizes collaboration, transparency, and sustainability. By reducing food waste and combating hunger, this project not only fosters social equity but also contributes to environmental conservation and community development.

1.1 - Purpose of the project:

The core purpose of *From Plate to Purpose* is to transform leftover, surplus food into a lifeline for individuals and families facing food insecurity. In a society where millions struggle to access a single nutritious meal, while edible food is routinely discarded, this project aims to build a compassionate and efficient bridge between waste and need.

TO SUPPLY LEFTOVER FOOD TO THE POOR

By mobilizing food donors, technology platforms, NGOs, and volunteers, the project seeks to:

- **Combat Hunger** by making wholesome food available to the underprivileged.
- **Reduce Food Waste** by rescuing and redistributing food that would otherwise go unused.
- **Promote Social Responsibility** by encouraging individuals and businesses to actively participate in a cycle of giving.
- **Support Environmental Sustainability** through lower waste and reduced landfill burden.
